relates to a display controller, and more particularly to a display controller capable of reducing power consumption of the display controller. 2. Description of the Prior Art A conventional video controller is mounted on a liquid crystal display (LCD) panel. The video controller generates

frame data, and transmits the frame data to the LCD panel. The LCD panel may have a resolution of 640×480, 800×600, 1024×768, 1280×1024 , or 1280×720 . The conventional video controller includes a feedback loop. When the LCD panel is driven in a normal mode, the

feedback loop has an effect on the power of the video controller and, thereby, increases the power consumption of the video controller. The present invention relates to a method for manufacturing a cable harness, and more specifically to a method for manufacturing a cable harness including

a plurality of cable harnesses having different diameter. As a cable harness for an electric circuit, there has been widely used a cable harness in which a plurality of wires are bundled, and the bundle of wires is formed into a flat cable by using an outer tape, and the flat cable is covered with an

inner tape. In general, a pattern is formed on an outer surface of the cable harness c6a93da74d
